

Your Fodera Onboard Preamp provides a tremendous amount of tonal flexibility. We have provided diagrams of our most common layouts. One of these should match your instrument. Some general points of interest:

1. Your instrument will draw battery power in either Active or Passive mode if an instrument cable is plugged into it.
2. The Volume, Tone Roll-Off and Pan controls work in both Active and Passive Mode.
3. The Bass, Mids and Treble controls only work in Active Mode.
4. The Midrange Switch only has an impact when the Mids knob is NOT in the center position.

Thanks for being part of the Fodera Family. Enjoy your bass!!
